For Immediate Release

PRESS RELEASE

When temperature matters....

Use Helapet Porters™ – validated shipping systems

Many vaccines are required to be kept between 2°C and 8°C to maintain their potency, which is often difficult when transporting them from your pharmacy to their intended point of use, particularly if this is to another hospital or out into the community.

The Helapet Porter™ and MiniPorter™ systems offer ***effective temperature control for prolonged periods*** ensuring that your products will be kept between 2°C and 8°C for up to 8 hours whilst in the system, even if you need to open the system to remove some product.

Available in a range of sizes to accommodate most volumes the Porter™ system is ideal for the transportation of vaccines and other temperature sensitive products within your hospital, to your outlying clinics or even to GP surgeries.

The practical design ensures the Porters™ are easy to handle and the two document pockets enable you to insert your own special instructions.

The Porter™ system is validated to maintain the temperature between 2° & 8°C even if the system is opened making them ideal for multi-drop deliveries.

If you would like to ensure your products are shipped at the right temperature then please call Helapet FREE on **0800 0 328 428**.
